## Community Notice

### Hydro One is working in your neighbourhood

Dear Neighbours:

As you may recall, Hydro One has recently completed a Class Environmental Assessment to refurbish approximately 50 aging wood pole structures along nine kilometres of the existing 115 kilovolt transmission line (Circuit C7BM) in your community. A map is shown on the reverse. This line was built in 1937, and the wood pole structures require replacement to ensure the continued reliability of the transmission line and the electricity supply to your area.

The wood pole structures will be replaced with composite poles, which will be similar in appearance to the existing poles, and will be replaced in close proximity to the existing pole locations.

Wood pole replacement work has started and will be completed by the end of the year. Currently, two crews are working in the Church Farm Road and Tatty Hill Road area installing new poles, relocating conductor and removing the old poles. Crews are working eastward along the line, and in the coming months you may see them completing the framing, stringing the line using various types of large construction equipment, and removing the old poles.

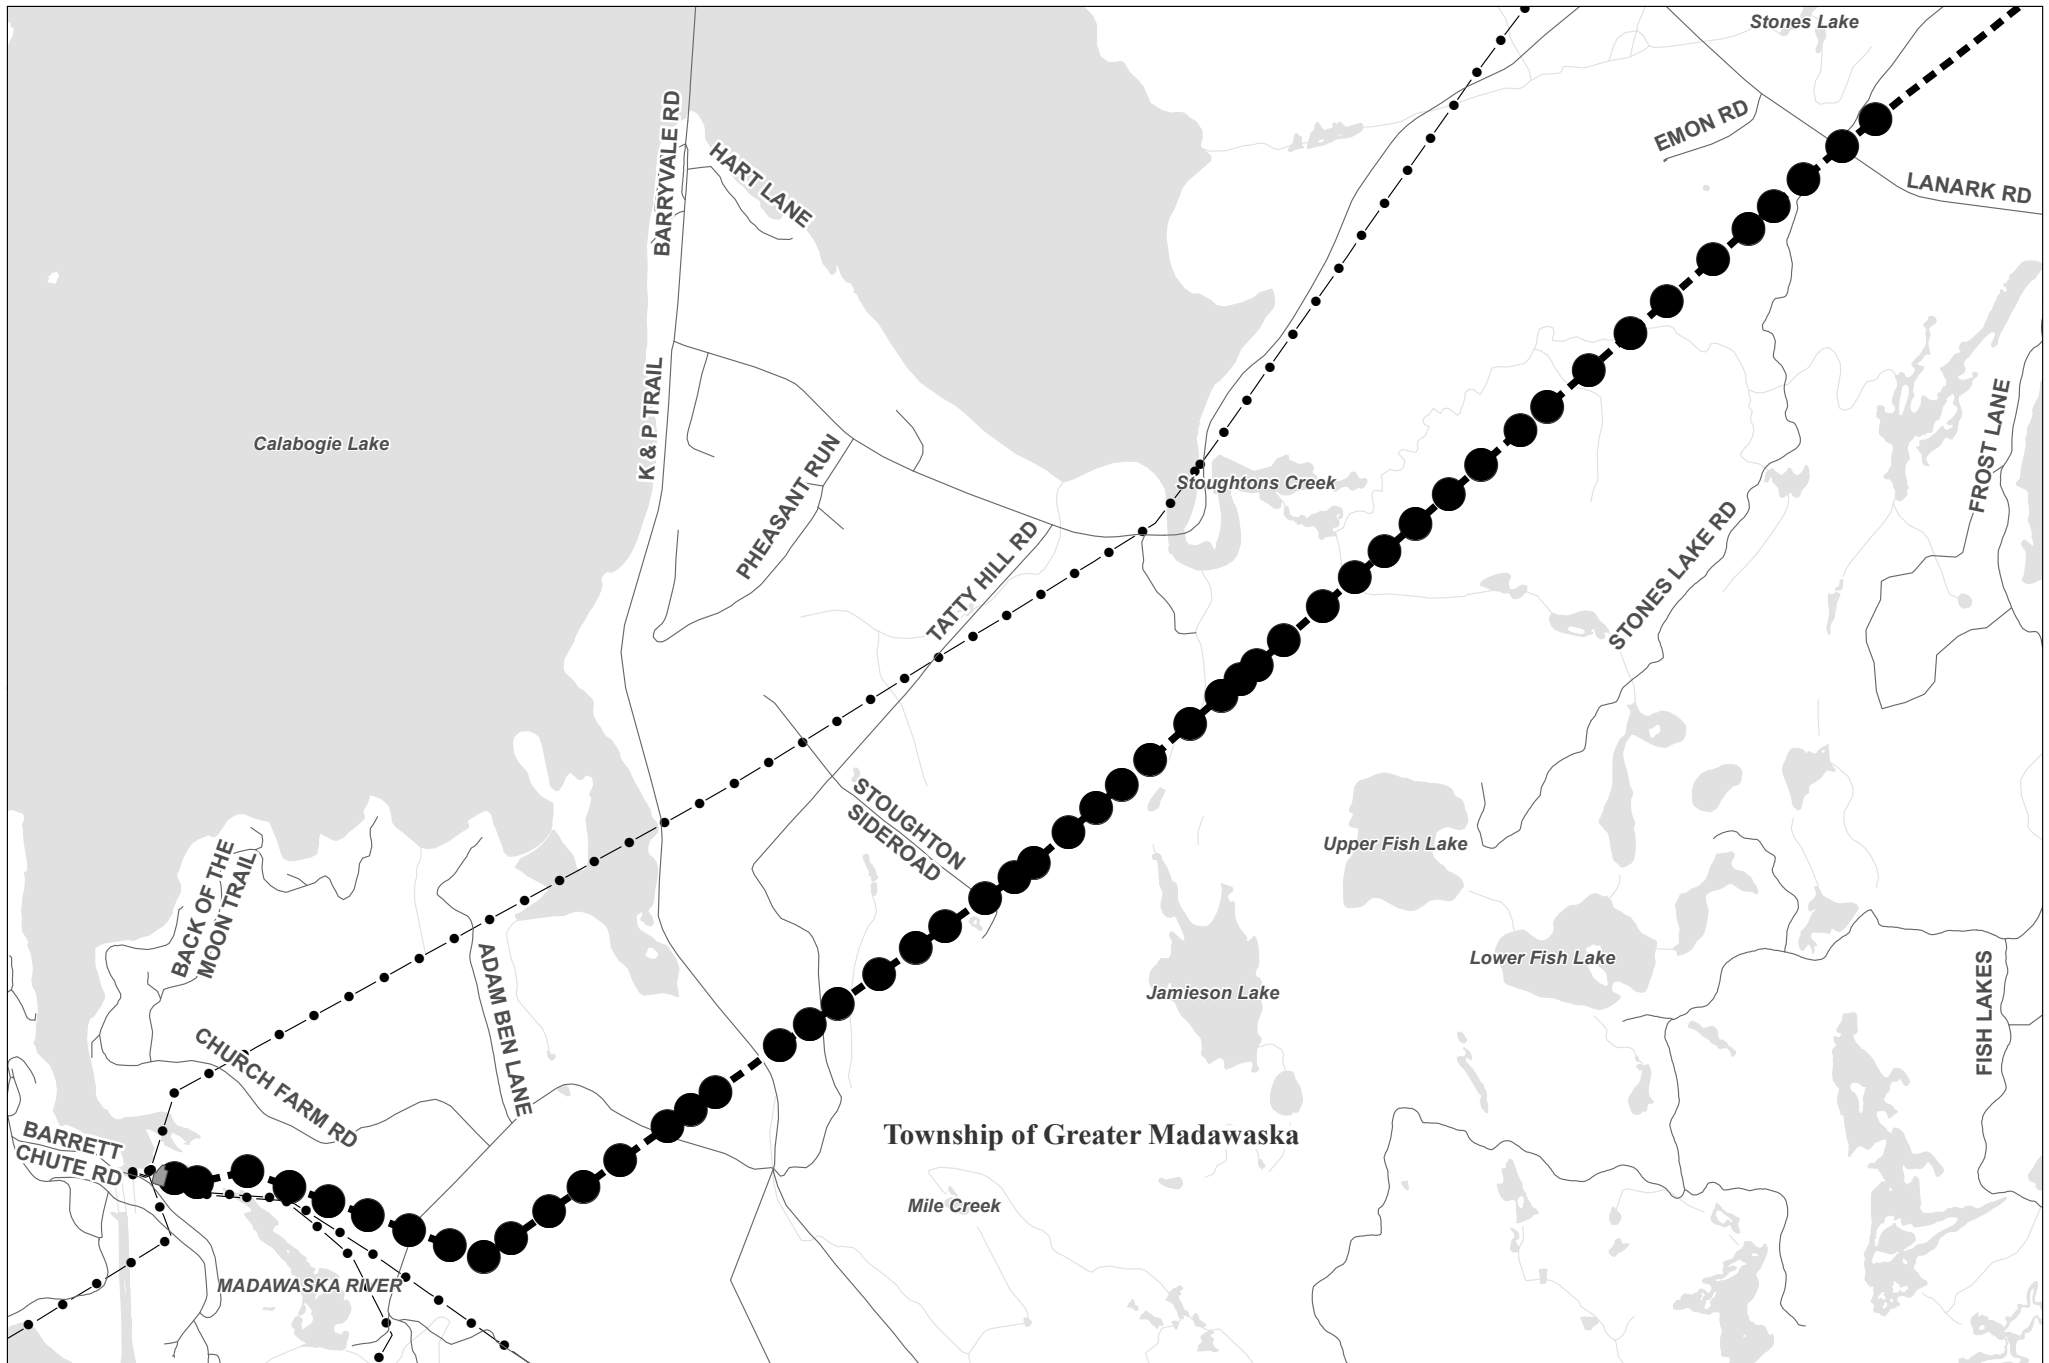

No interruption in electricity service is anticipated as part of this project.

Thank you for your patience as we complete this important work.
