

# **Important notice: Fall/winter water level adjustments**

Please be advised that Monday, October 11, 2021 marked the end of the summer water level minimums for the Madawaska River. Ontario Power Generation (OPG) will adjust operations within the allowable operating levels during the fall and winter months. This may result in lower water levels.

When the proper environmental conditions have been reached, water levels at Calabogie Generating Station (GS), and Stewartville GS, on the Madawaska River, will be drawn down to encourage amphibians and reptiles to hibernate safely. This is an initiative supported by the Ministry of Northern Development, Mines, Natural Resources and Forestry.

Residents and business owners along the river are advised to take all necessary precautions to ensure lower water levels do not impact property.

For additional information, please call Matt Mulvihill, 613-936-7187
